Learn More

The EMV Impact Shield is a durable protective covering designed to endure the demanding conditions of a laundromat. It is made from impact-resistant stainless steel and fits directly over an existing EMV Card Reader without requiring the reader to be removed. If your EMV Reader has physical damage to the back or sides of its housing, the EMV Impact Shield can help secure those areas.

Crafted from impact-resistant stainless steel, the EMV Impact Shield fits seamlessly over your current EMV Reader without requiring the removal of the card reader. Installation is simple and takes less than 2 minutes. If the housing of your EMV Reader has sustained damage to the back or sides, this shield provides robust coverage to secure those areas. In most cases, it eliminates the need for replacement while ensuring the reader’s full functionality, including swipe capabilities. These shields have been rigorously tested to endure challenging scenarios, including impacts from laundry carts, exposure to bleach and chemicals, over-tightened screws, and even physical tampering. They have demonstrated exceptional durability and reliability under such conditions. Furthermore, even when installed on EMV readers with substantial housing damage, the shields have proven to function flawlessly.
